Experiments on Packet capture tool : WIRESHARK.

Aim:-

To capture and analyze network packets using the Wireshark packet capture tool. To inspect packet details, protocols, filtering and network traffic flow using Wireshark.

Description:-

Wireshark is a network analysis tool, formerly known as Ethereal, that captures and displays network packets in real time. It provides filters and packet analysis features to inspect network traffic, troubleshoot problems, and analyze problems.

CAPTURING THE PACKETS:-

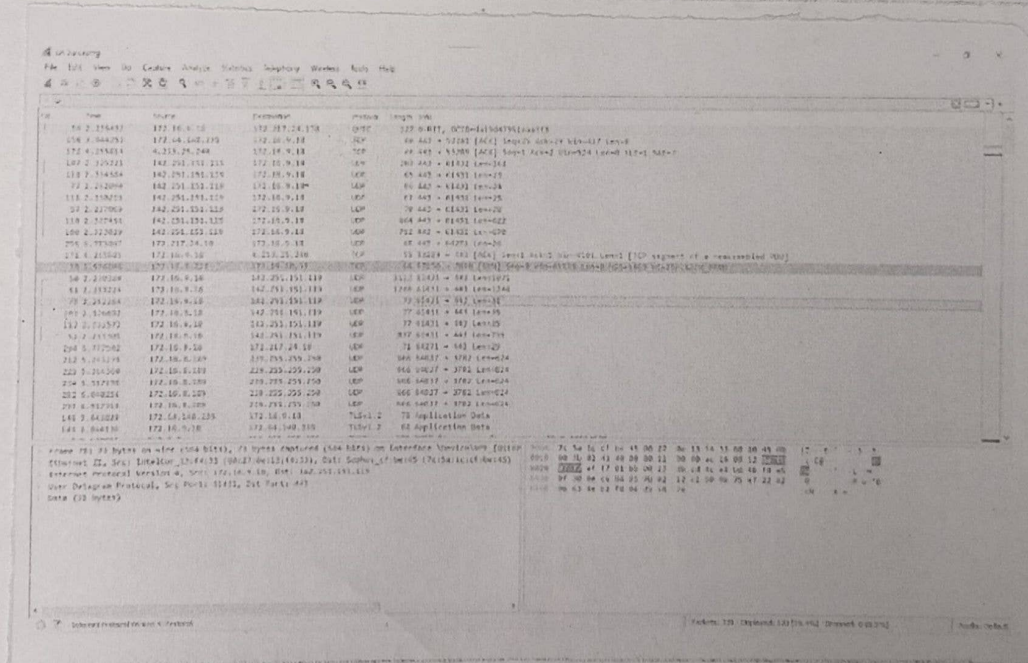

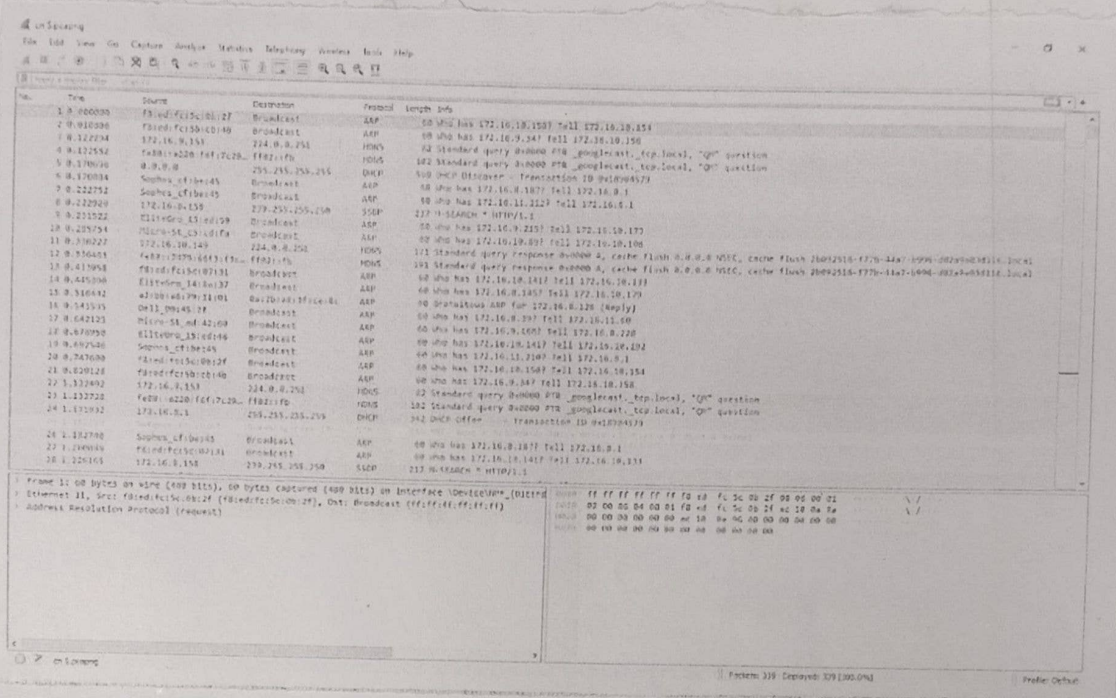

- * Select Local Area Connection in Wireshark.
- * Go to capture option.
- * Select stop capture automatically after 100 packets.
- * Then click start capture.
- * Save the packets.

FILTERING THE PACKETS:-

- * Open Wireshark, select the network interface, and capture 100 packets.
- * Enter the required protocol filter (TCP, UDP, ARP, DNS, etc) in the filter bar.
- * Select a packet to inspect its details and bytes.

* For flow graph, select status filter → flow graph.

* Save the filtered packets.

Result:

Thus, the packet was ~~not~~ filtered and captured successfully using Wireshark.
